

RoB 3.3 **Could** missingness in the outcome depend on its true value?

| Example outcomes |
|---|
| Fatigue: If the authors write a sentence about some patients who were not showing up at the follow-up because they said they were too tired, then annotate this because the missingness depends on the actual/true value of fatigue. |
| Fall: If the patients did not show up to the final exam because they did fall and were hospitalized, then the outcome fall - missingness depends on the true value. |
| Assessors should reflect on the label the reason for missingness. Probably different labels are used, e.g., for the outcome fatigue, a possible explanation would be "exhaustion"? |

Annotate full sentences if not otherwise specified to annotate only phrases.
